

ABSTRACT OF THE INVENTION

METHODS OF TREATING CONDITIONS ASSOCIATED WITH AN EDG-7 RECEPTOR

5

In one aspect, the present invention provides a method for modulating an Edg-7 receptor mediated biological activity in a cell. A cell expressing the Edg-7 receptor is contacted with a modulator of the Edg-7 receptor which is capable of modulating an Edg-7 receptor mediated biological activity. In another aspect, the present invention
10 provides a method for modulating an Edg-7 receptor mediated biological activity in a subject. A therapeutically effective amount of a modulator of the Edg-7 receptor is administered to the subject.
